

# Measuring a Dip Tube or Container

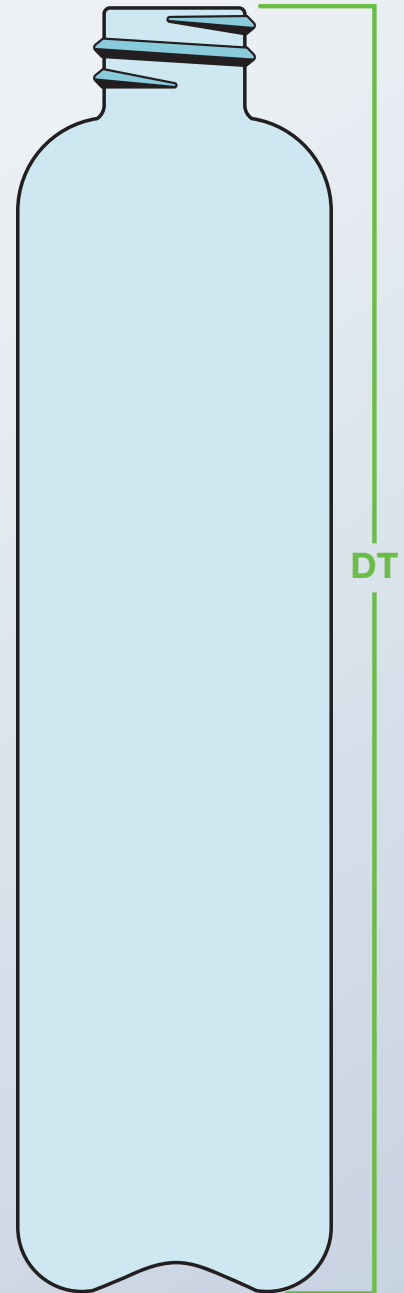

## MEASURING A DIP TUBE:

In order to find the correct dip tube length of your dispenser, always measure from the bottom of the gasket to the very end of the dip tube. The height of your container and the dip tube length of your dispenser should match each other. If you are having difficulties getting an accurate length, please ask our friendly staff to assist you.

## SERVICES:

McKernan does offer rework services to customize many of our dispensers, please ask your rep about pricing and lead times. We also have the capability to produce a custom dip tube length for our continuous stock fine mist sprayers, which is free of charge.

## MEASURING YOUR CONTAINER:

To find the correct dip tube length for your container, begin by measuring from the landing (the very top of the neck) all the way to the very bottom of the container.
